ANSWER. You are right my old tertiary fossil.

It's easy wough to do that. Put the 'pressure on" so that "one No. 3 mixer" world "supply every want," most satisfactory results. The cooling then nobody bould want any larger and your neighbor the pays for a No. 5 could return to a No. 3. The question would then recur on whether the price for your No. 3 should be pump on a level with theirs to a fair cheapfuel rate, or whether theirs should be put down to yours same as you, a half rae, where would the revenue come from? That you are not able to use a larger No. and yet want others to do so implies that yu are cultivating a less number of acres-only "3" we will suppose to keep the analogy.

If you want more "pressure" fat locate your growlery on the other side of the regulator and we will give you 40 younds pressure twenty-four hours in the day! You should not be "insulted."
